Subject: Re: CFT Model....

Stephanie:

The CFT model is being calibrated using 2,3,7,8-TCDD and Tetra-CBs, which is consistent with Section 5.6 of the 2006 MWP. The preliminary calibrated CFT model was submitted to EPA for review and a calibration refinement is in progress. The CPG believes the discussion of extension of the model to other COPCs should take place following EPA's approval of the 2,3,7,8-TCDD and Tetra-CB calibrations.

Please let me know if we need to discuss this further.

Thank you.

Hi Rob,

Another quick modeling question for you. my understanding is that right now, you are running the CFT model for 2,3,7,8-TCDD and tetra-PCBs only. How do you plan to address the other COPCs?

Thanks,
Stephanie
